

UNIVERSAL SCREEN CLEANER

Unique Cleaning Pad removes messy fingerprints from LCD screens, plasma screens and computer screens easily and safely.

INSTRUCTIONS FOR USE

1. Switch off the screen and allow it to cool to room temperature.
2. Pull the handle up to release the VidiMax™ Brush from the base. Wipe away dust particles from the screen surface. Place the Brush back into the base.
3. Prior to the first use of the VidiMax™ Cleaning Pad, wipe the screen surface with the Conditioning Tissue to remove any “hard” deposits. Discard the tissue after using.
4. Press the push-button and pull back to release the VidiMax™ Cleaning Pad.
5. Clean fingerprints on the screen with smooth circular motions of the Cleaning Pad.
6. If some smudges persist, breathe gently on the surface to be cleaned and repeat the process.
7. Slide the VidiMax™ Cleaning Pad back into place.
8. **Important:** do not use on wet surfaces or touch with your hands. Vidimax™’s cleaning compound is carbon-based, similar to a pencil lead. It leaves black marks on all surfaces which are not very, very smooth.
9. For more detailed information, please see www.lenspen.com.

Please carefully observe the instructions for use. **IMPORTANT:** clean only when screen is dry, turned off and in cold mode. Do not use on nylon mesh or anti-glare screens.
