

SCREENKLEAN™ FAQs

Here are some Frequently Asked Questions about ScreenKlean™

How does ScreenKlean™ work?

The Cleaning Pad surface is covered with a special Invisible Carbon compound that removes the fingerprint oils. This is not “high tech” – this is “old tech”! Many years ago our grandmothers often used newspapers to clean the windows and mirrors in the house. Why did that work so well? Newspapers are covered with printer’s ink, which is about 25% carbon ... and the carbon molecule has a unique ability to absorb oils. The Invisible Carbon compound in ScreenKlean™ is unique and it has been specially formulated to handle the very large amount of fingerprint oils on a tablet surface.

How long does ScreenKlean last?

You’ll be able to clean a really dirty iPad™ about 150 times. Why? Look at the inside edge of the Cap and you will see a foam pad filled with carbon. Sliding the Cleaning Pad in and out causes the two surfaces to rub together, carbon-to-carbon, and this recharges the carbon on the Cleaning Pad so it can be used many times. And how about this? ScreenKlean has no expiration date! If you lose your ScreenKlean and find it years later – it’s good to go! There are no liquids in a ScreenKlean – nothing to dry out!

Do I need to buy a new ScreenKlean after 150 cleanings?

No – you simply replace the Cleaning Pad which comes in its own little storage box and is sold separately – just like a razor and razor blades! It’s easy to change out the Cleaning Pad – just push the little tab and twist off the old Cleaning Pad. Open up the Replacement Pad box and simply twist the tab onto the new Cleaning Pad.

Can ScreenKlean clean a plastic screen protector?

ScreenKlean easily and safely cleans fingerprints off the scratch-resistant glass surface of a tablet. ScreenKlean can also clean fingerprints from the surface of good quality screen protectors (especially those with a scratch-resistant surface). This can greatly extend the life of your screen protector.

I have an iPad Smart Cover – do I still need a ScreenKlean?

Yes – more than ever! Look at the inside surface of the Smart Cover™ and you can see a thin layer of microfiber that after only a few uses is filled with fingerprint oil from the screen surface. It then actually applies a layer of fingerprint oil back into the iPad™ screen every time you close it! If you have a new Smart Cover then use ScreenKlean to clean your iPad each time before you close the Smart Cover. Sorry – if you already have a Smart Cover filled with fingerprint oil we have not yet found a cleaning solution to this problem.

How is ScreenKlean different from SideKick?

ScreenKlean works the same way as SideKick. The difference is that ScreenKlean features the new LensPen Invisible Carbon compound.
