

# SMARTKLEAR™ FAQs

Here are some Frequently Asked Questions about SmartKlear™

---

## How does SmartKlear work?

The Cleaning Pad surface is covered with a special Invisible Carbon compound that removes fingerprint oils. This is not “high tech” – this is “old tech”! Many years ago our grandmothers often used to clean the windows and mirrors in the house using newspaper. Why did that work so well? Newspapers are covered with printer’s ink and printer’s ink is about 25% carbon, and the carbon molecule has a unique ability to absorb oils. The Invisible Carbon compound in SmartKlear is unique and it has been specially formulated to handle the very large amount of fingerprint oils on the smartphone surface.

---

## How long does SmartKlear last?

You’ll be able to clean a really dirty smartphone approximately 300 times. Why? Look at the inside edge of the Cap and you will see a foam pad filled with carbon. Sliding the Cleaning Pad in and out causes the two surfaces to rub together, carbon-to-carbon, and this re-charges the carbon on the Cleaning Pad so it can be used many times. How about this? SmartKlear has no expiration date! If you misplace your SmartKlear and find it years later, it’s good to go! There are no liquids in a SmartKlear – nothing to dry out!

---

## Do I need to buy a new SmartKlear after 300 cleanings?

No – you simply replace the Cleaning Pad which comes in its own little storage box and is sold separately – just like a razor and razor blades. It’s easy to replace the Cleaning Pad – just push on the little tab and twist off the old Cleaning Pad. Open the Replacement Pad box and simply twist the tab onto the new Cleaning Pad.

---

## Can SmartKlear clean a plastic screen protector?

SmartKlear easily and safely cleans fingerprints off the scratch-resistant glass surface of a smartphone. SmartKlear can also clean fingerprints from the surface of good quality screen protectors (especially those with a scratch-resistant surface). This can greatly extend the life of your screen protector.
